INFORMED CONSENT FOR THE HUMAN IMMUNODEFICIENCY VIRUS (HIV) ANTIBODY TEST

If you want to be tested to see if you have been infected with HIV, the virus that causes AIDS, please read the following and ask for an oral explanation of anything that you do not understand.

Purpose of Test: This test shows if you have antibodies to the Human Immunodeficiency Virus (HIV) that causes AIDS; if there are antibodies, you have been infected with HIV and can pass the virus on to others. This test can not determine if you have AIDS.

Blood Drawing: This HIV antibody test is a blood and/or a urine test. A sample of blood and/or urine will be collected from you and then analyzed by a laboratory to determine if it contains HIV antibodies.

Limitations: As with many laboratory tests, there is a possibility of inaccurate results. For instance, a false negative result could occur if you have recently been exposed to the virus but have not yet developed antibodies.

Potential Uses of Test: If your HIV antibody test results are known, it may help your doctor determine the medical care you need. It may also help you make personal decisions, such as whether to have children and how best to avoid the risk behaviors that transmit the virus. Your results are reported to the Montana Department of Health and Environmental Sciences (DHES), but only positives or negatives; no name is attached. If testing for insurance, refer to insurance company testing section.

Counseling: At a minimum, counseling in the form of written materials developed by the DHES must be given to you before you consent to have the HIV antibody test performed and additional written materials from DHES must be provided to you after you receive the test results from your health care provider or designee.

Voluntary and Anonymous Testing: Taking an HIV antibody test is voluntary; you do not have to take the test. If you prefer, anonymous testing in which your name is not known to those performing the test, is available at several locations established by the DHES in Montana. These locations can be obtained from the DHES, your local health department or calling 1-800-233-6668. (Refer to insurance section.)

Withdrawal of Consent: You may withdraw your consent from the HIV test at any time until the blood and/or urine lab specimen is collected.

Confidentiality: Your test result is a confidential medical record and is protected by Montana law, which states that medical information can be released only with your consent, or under conditions specified by the Uniform Health Care Act (Title 50, Chapter 16, Part 5, MCA) or by the Government Health Care Act (Title 50, Chapter 16, Part 6, MCA). When authorizing a health care provider to release information you may specify which part of your medical records you want released and to whom. Signing a medical information release consent form does not waive your legal rights.

Local Health Department and Insurance Company Testing: If the test is being performed as part of an application for insurance, results will be reported to the health care provider designated by you, if it is positive. A negative test may be obtained from your insurance company. (If there is no health care provider designated, a positive test, result may be reported to the local health department for post-test counseling.) A positive test result may have an effect on your ability to obtain insurance. Ask your insurance representative about who receives and has access to your HIV antibody test results.

Unconscious or Otherwise Mentally Incapacitated: If the patient is 1) unconscious or otherwise mentally incapacitated, 2) there is no legal guardian, 3) there are medical indications of an HIV-related condition, 4) the test is advisable in order to determine the proper course of treatment then the patient's next of kin (parent, adult child, grandparent, adult sibling, or legal spouse); or the patient's significant other (individual living in a current spousal relationship with another individual but who is not legally a spouse of that individual) may receive pretest counseling and provide written informed consent. If circumstances in 1-4 above exist and the patient is in a hospital, then the person designated in the patient's medical records may receive pretest counseling and provide written informed consent on behalf of the patient. If circumstances in 1-4 above exist and the patient is in a hospital, and none of the persons listed above are available; the health care faculty may within a reasonable time order a HIV test.

STATEMENT OF CONSENT: By signing below, I certify that:

(1) I have read and understand the above explanation of the HIV antibody test, including an explanation of the nature of the test, what the test results mean, counseling requirements, the test is voluntary and test results are confidential;
(2) I have received and read written pre-test counseling materials drafted by the DHES;
(3) I understand that anonymous testing, if I desire it, is available at one of the counseling/testing sites established by the DHES or elsewhere;
(4) I agree to have a sample of my blood or urine tested for the presence of the HIV antibody, and authorize

Name of Health Care Provider: _____

to receive and inform me of the results of the test. Post-test counseling is to be given, at minimum in the form of written materials developed by the DHES.

(5) I understand that when tested for insurance purposes that a positive test result will be given to the designated health care provider (listed above). If desired, I can seek results of a negative test from the insurance company.
(6) I authorize Protective Life Insurance Company or its reinsurers to make a brief report of any personal health information to the MIB.

HIV ANTIBODY TEST

Materials provided by the Department of Health and Environmental Sciences - STATE OF MONTANA

BEFORE YOU TAKE THE HIV ANTIBODY TEST

THE HIV VIRUS

Human immunodeficiency virus (HIV) is the virus that causes Acquired Immune Deficiency Syndrome (AIDS). The virus injures your immune (infection-fighting) system. If your immune system becomes so weakened by the virus that you can't fight off other diseases on your own, you have developed AIDS.

THE HIV ANTIBODY TEST

When you have an HIV infection, your body produces antibodies. The HIV antibody test is a test for those antibodies. This test is voluntary. You do not have to take the test.

A **POSITIVE TEST** means that you are infected with HIV. You can pass the virus to other people through certain behaviors. A positive test doesn't mean you have AIDS.

A **NEGATIVE TEST** means that you probably don't have HIV infection. However, because it takes time for the body to make antibodies some people may have a negative test and still be infected with the virus. If the test is done between the time the virus enters your body and the time antibodies are made, the test will be negative. You would still be able to transmit the virus to others.

Even if you have a negative test, you can still get the virus.

HOW HIV IS SPREAD

HIV is not spread by common everyday contact, but by certain risky activities. These risky activities are called RISK BEHAVIORS. These behaviors involve passing semen, vaginal secretions, and/or blood from an infected person to someone else. You can get the virus when an infected person's semen, vaginal secretions, or blood enters your body. Open sores make it easier for the virus to enter someone's body. Having sexually transmitted diseases like herpes or syphilis could cause open sores. These sexually transmitted diseases are treatable. See your doctor or nearest health department.

A woman who is carrying HIV may transmit the virus to her unborn child. She may also transmit the virus through her milk to a nursing infant.

THESE ARE RISK BEHAVIORS:

Sexual Contacts

- penis in or around vagina
- penis in or around rectum
- tongue or mouth in or around rectum
- tongue or mouth in or around vagina
- tongue or mouth on or around penis

Sharing Needles or Syringes

Perinatal

- infected mother to unborn child

NOTE: Since blood and blood products used in transfusions have been tested for HIV antibodies since 1985, the risk of getting HIV infection through a blood transfusion is extremely low. There is no risk in donating blood.

HOW YOU CAN PROTECT YOURSELF

The virus is in the semen, vaginal secretions and/or blood of an infected person. You can protect yourself by shielding yourself from these body fluids.

RISK REDUCING BEHAVIORS
(Safest listed first)

- Don't have sex (abstinence)
- Have only one sex partner (monogamy); both must be HIV free
- Use latex condoms (rubbers)
- Don't share needles or syringes
- Use clean needles or syringes

The sex act is risky. Latex condoms reduce the risk. Natural fiber condoms do not reduce the risk. Latex condoms must be used throughout the sexual activity and you must use them in the right way. Don't be afraid to ask your pre-test counselor for demonstrations. The spermicide nonoxynol-9 is also recommended, but only when used with a condom. Do not use oil-based lubricants with a condom.

If you are a person who engages in risk behaviors, do not donate blood. Avoid pregnancy until you are certain you and your partner are HIV free.

REASONS TO TAKE THE TEST

The test will tell you if you have the virus. It will allow your doctor to begin treatment sooner. New drugs can help maintain your health if you have the virus. Risk reducing behaviors can prevent the spread of HIV.

CONCERNS ABOUT TAKING THE TEST

Finding out you have an HIV infection is frightening. You may develop AIDS. You may transmit the virus to someone else. Having the virus can affect your entire life. It is important to consider who is available to talk to you about your test. This is not information to share casually.

Free and anonymous testing is available at Counseling and Testing Sites. A list of Counseling and Testing Sites is available by calling the Montana AIDS HOTLINE at 1-800-233-6668, or your nearest health department.

CONFIDENTIALITY (PRIVACY)

The professionals performing and recording this test value the necessity of keeping your test results confidential. You may be concerned about the possibility of friends, employers, neighbors or your insurance company finding out your test result. Discuss confidentiality policies with your pre-test counselor to find out under what circumstances others might have access to the result.

PARTNER NOTIFICATION

If your test is positive, sex and needle-sharing partner(s) need to be notified and given the opportunity to receive counseling and testing. This is a very sensitive task. Public health personnel can either tell your partner(s) or help you in how to tell your partner(s). By law, public health personnel cannot tell your partner(s) the time or place of possible infection or your identity.
